

MEDICAL / RECOVERY & READINESS

Prepare the space your care teams depend on.

Physical recovery in a healthcare facility needs a clear relationship with the people directing care. NorthStar works with your designated teams on restoration, remediation and repairs within facility-led requirements.

Work areas belong in the care discussion.

A hospital wing, outpatient center and medical office have different operating demands. Proposed work must account for adjoining departments, access and utilities. NorthStar addresses physical recovery; facility leaders and their designated teams direct infection-control requirements, care priorities and return-to-use decisions.

RELEVANT EXPERIENCE / THE WORK BEHIND THE RESULT

North Central Bronx: space for the next phase

100,000+

square feet of preparatory work

North Central Bronx Hospital | 2020

At North Central Bronx Hospital in 2020, preparation across eight floors supported the wider ICU reconstruction program. The four-week intensive effort describes preparatory work, rather than completion of the clinical expansion.

01 The challenge

New York City's early 2020 COVID-19 surge created an urgent need for additional intensive-care space. At North Central Bronx Hospital, existing floors needed substantial preparation before reconstruction could move forward as part of the hospital's wider expansion program.

02 The work

NorthStar mobilized multiple shifts across more than 100,000 square feet and eight floors. Crews removed aged systems, interior finishes and unused spaces while addressing hazardous materials within the demolition work. An intensive four-week preparation effort supported the reconstruction sequence and required close work with the active healthcare facility.

03 The milestone

The four-week preparation effort supported the next phase of ICU reconstruction. The full clinical expansion formed part of the hospital's wider program, with its own clinical and operational objectives.

MORE RELEVANT EXPERIENCE

LSU Student Health Center

A phased return of space

Following a fire, the east wing reopened in two weeks while the more damaged west wing was prepared for reconstruction. Two weeks applies to the east wing only.

BEFORE THE NEXT INTERRUPTION

Bring facility requirements into the first conversation.

Invite facilities, infection prevention and emergency management to review the setting together. Begin with occupied areas, access needs and the work information each team needs to support facility-led decisions.

Affected and adjacent

Which departments and occupied spaces sit beside the proposed work, and what access restrictions apply?

Utility and water contacts

Who reviews building utilities and water-system concerns alongside physical restoration work?

Facility handoff

What records and completion reviews do the authorized facility teams need before deciding how space returns to use?

CAPABILITIES TO SHAPE YOUR PLAN

Water damage recovery

Fire and smoke restoration

Microbial remediation

Hazardous-material
abatement

Selective demolition

Repair and reconstruction

YOUR NEXT CONVERSATION

Review your facility's recovery requirements ↗

Meet with NorthStar and your designated facility teams to review work areas, access, communication and the information needed for a planned recovery handoff.
