

INDUSTRIAL / RECOVERY & READINESS

A clear next stage for complex industrial sites.

After an incident or ahead of planned change, NorthStar connects physical recovery with demolition, environmental work and site restoration. Build the work around retained assets and the intended end condition.

Plan the work around what stays.

A site can need damaged structures removed while nearby operations continue. Utilities, material conditions and future use all shape the work. NorthStar Recovery brings the right NorthStar Group specialists into the discussion, with the delivery team established for each engagement.

RELEVANT EXPERIENCE / THE WORK BEHIND THE RESULT

ProLogis / FedEx: preparing the next site

100

days for demolition and
remediation

ProLogis / FedEx Facility | 2020

At the ProLogis / FedEx facility in 2020, demolition and remediation covered two tornado-damaged buildings totaling 1.15 million square feet. The 100-day milestone excludes full rebuilding of those facilities.

01 The challenge

A March 2020 tornado damaged two buildings supporting FedEx operations in Mount Juliet, Tennessee. The combined 1.15-million-square-foot site required demolition and remediation, while salvageable sortation units needed to be recovered and put to use at another facility.

02 The work

NorthStar worked two twelve-hour shifts and brought Sigma Engineering Solutions into daily structural reviews. Crews dismantled, cataloged, crated and relocated 12 sortation units, then rebuilt them at another ProLogis facility. Demolition and remediation included concrete processing and reinstatement to site specifications, with engineering oversight throughout the work.

03 The milestone

Demolition and remediation were completed in 100 days. Relocated sortation units supported logistics operations at another facility, while the original site was prepared for rebuilding. Full rebuilding was a separate stage.

MORE RELEVANT EXPERIENCE

Air Products: Texas City 2TX | 2023–2024

An active industrial setting

Demolition, abatement and site restoration were coordinated around utilities, retained operations and daily client decisions.

BEFORE THE NEXT INTERRUPTION

Make the site's end condition explicit.

Bring site leadership, EHS and the relevant engineering specialists to the table. Review retained operations, available material information and the condition the owner expects when the agreed work is complete.

Retained operations

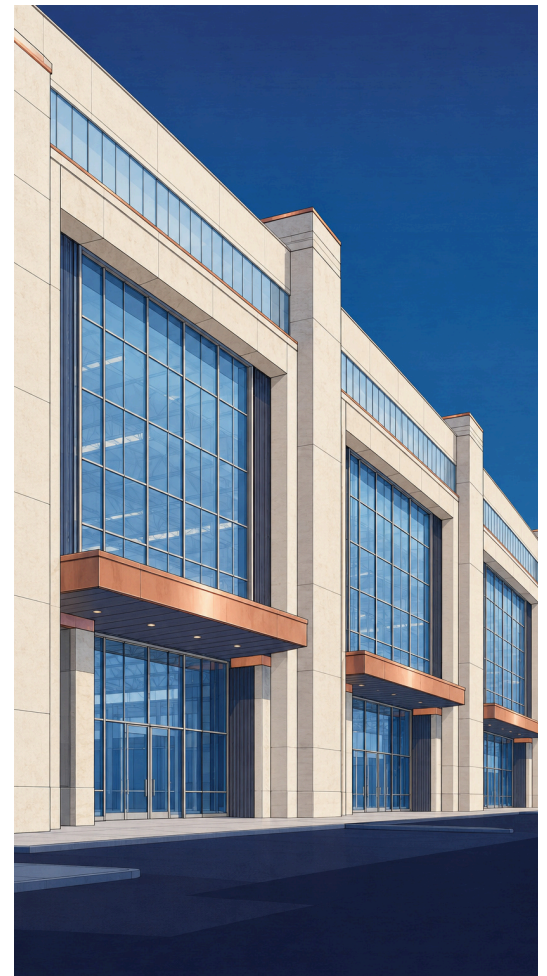

Which utilities, access routes and assets must remain available, and who authorizes changes to them?

Material information

What surveys, hazard records and disposal requirements are available for the affected structures and materials?

Completion criteria

What must be removed, restored or left ready for the site's next stage?

CAPABILITIES TO SHAPE YOUR PLAN

 Emergency recovery Environmental remediation Hazardous-material abatement Decontamination Selective demolition Facility decommissioning

YOUR NEXT CONVERSATION

Review your site's next stage

Discuss site conditions, retained operations and the required end condition with NorthStar. Establish the appropriate recovery and specialist team for the work ahead.
