

MANUFACTURING / RECOVERY & READINESS

Facility recovery built around your next production milestone.

A plant's recovery depends on how its spaces work together. NorthStar brings restoration, remediation and structural repairs to the facility priorities behind your next production milestone.

**Start with what
production needs
next.**

A damaged production area can affect storage, packaging and shipping. The work sequence should reflect those connections. NorthStar addresses the physical facility with your plant team, while equipment specialists and quality leaders direct production acceptance and restart decisions.

RELEVANT EXPERIENCE / THE WORK BEHIND THE RESULT

Firestone: restoring a path to production

23

days to production restart

Firestone Polymers Plant | 2020

Following Hurricane Laura in August 2020, production began at Firestone's Lake Charles polymers plant after a 23-day recovery effort. That milestone describes restart; final project completion is unspecified.

01

The challenge

Hurricane Laura damaged more than 35 structures and critical support systems at Firestone's Lake Charles polymers plant in August 2020. With power lost across the site, the recovery team faced a 28-day target for the return of production.

02

The work

NorthStar's operations team arrived within six hours of landfall. Temporary generation supported continuous shifts involving more than 100 personnel. The work combined structural repairs, demolition of compromised structures and environmental remediation. A mobile office complex gave Firestone staff working space while repairs and recovery progressed across the plant.

03

The milestone

Production began after a 23-day recovery effort, ahead of the stated 28-day target. This was a production restart milestone; the project's final completion date is not specified.

MORE RELEVANT EXPERIENCE

Dr Pepper / Snapple | 2013

Connected production spaces

After a fire and roof collapse, NorthStar supported the general contractor with restoration across production, storage and loading areas.

BEFORE THE NEXT INTERRUPTION

Bring the production sequence into the plan.

Start a working session with the plant manager, engineering, EHS and quality. Use the next operating milestone to identify the spaces and decisions that deserve attention before a loss.

Critical spaces

Which production, storage and loading areas must be available together for the next operating milestone?

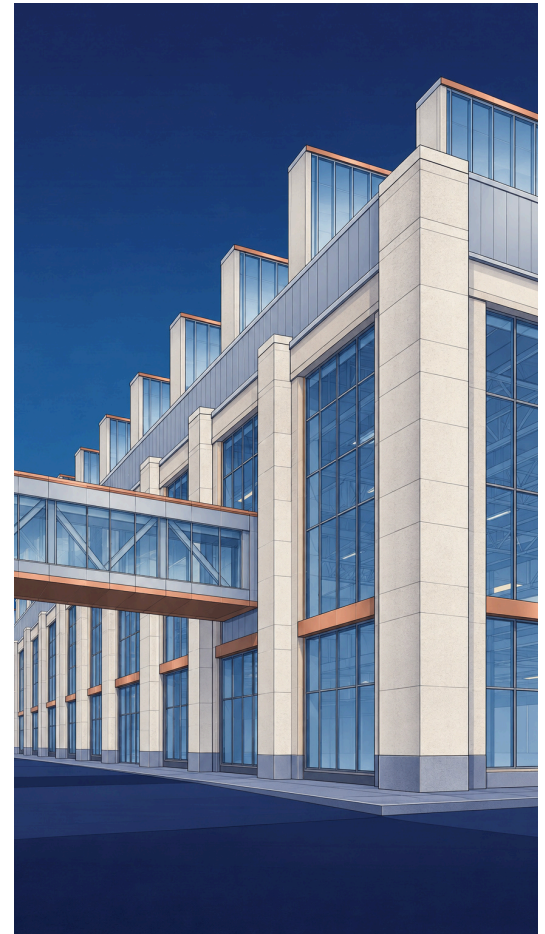

Operating constraints

Where will access, utilities or adjacent activity affect restoration and material removal?

Restart authority

Which engineering, equipment and quality contacts approve the handover and production restart?

CAPABILITIES TO SHAPE YOUR PLAN

Pre-loss planning

Fire and smoke restoration

Water-damage recovery

Environmental remediation

Selective demolition

Reconstruction
