

ABATEMENT / QUICK FLYER

A clear scope begins with the material conditions.

Asbestos, lead, mold and other hazardous materials can change a renovation or demolition plan. NorthStar helps connect the abatement scope with the work around it.

Identify the work

Use available surveys and testing to define the materials, quantities and locations included in the engagement.

Plan the environment

Address work zones, containment needs, access and adjacent building use within the project-specific plan.

Connect the next phase

Align abatement with selective demolition or renovation, including testing responsibilities and release requirements.

No. 8

ENR 2025 ·
Abatement/Environmental

Category-specific industry recognition.

ENR's 2025 table ranks NorthStar Group Services Inc. eighth in Abatement/Environmental, based on \$59.5 million in 2024 category revenue. This ranking is separate from demolition.
