

DECOMMISSIONING / QUICK FLYER

Recover value. Define the destination.

Equipment, recoverable metals, concrete and regulated materials each need a defined destination. NorthStar connects asset recovery and recycling with the dismantlement plan.

Retain or relocate

Identify equipment for dismantling, rigging and relocation, with the owner defining retention priorities and destination requirements.

Recover usable value

Evaluate salvage and recycling opportunities within the facility's material condition, project scope and handling requirements.

Separate material pathways

Coordinate metals and concrete recovery with abatement and other material-management work; avoid treating every removal as demolition debris.

12

Sortation units · 2020 project

Recovery extended beyond dismantling.

At the ProLogis/FedEx project in Mount Juliet, NorthStar reports dismantling, cataloging, crating and relocating 12 sortation units, then rebuilding them at another ProLogis facility.
