

DEMOLITION / SERVICE BRIEF

Make room for what comes next.

From selective removals to complete facility demolition, NorthStar connects the work sequence, site constraints and intended end condition.

STRUCTURAL DEMOLITION / INDUSTRIAL FACILITIES

Remove with purpose. Protect what stays.

A demolition plan begins with more than the structure coming down. It must account for retained utilities, neighboring operations, access, material handling and the next use of the site.

STRUCTURAL DEMOLITION | SELECTIVE REMOVAL | SITE RESTORATION

CAPABILITIES / SCOPE PLANNING

Define the limits. Sequence the work.

Bring NorthStar into the planning conversation before removal begins. Align the scope with the site information, engineering requirements and owner decisions that shape execution.

Plan the transition

Coordinate demolition planning, permitting interfaces and sequencing around the agreed scope.

Match the removal method

Connect structural or selective demolition with dismantlement and concrete-cutting requirements.

Manage material pathways

Integrate abatement, waste handling, salvage and recycling into the work plan.

Prepare the next condition

Connect removal and site restoration to the owner's defined completion criteria.

No. 1

ENR 2025 / Demolition & Wrecking

Industry scale, independently ranked.

NorthStar Group Services Inc. ranked first in ENR's 2025 demolition and wrecking table, based on \$470.4 million in 2024 category revenue.

ENR, October 27, 2025, p. 64. A revenue ranking, not a safety rating.

01

Identify structures, utilities and assets that must remain.

02

Share surveys, structural information and site access constraints.

03

Define turnover condition, schedule interfaces and decision owners.
