

QUALIFICATIONS / QUALIFICATIONS

A broader capability set for complex facility decisions.

For owners, procurement teams and capital-project leaders evaluating a specialty contractor, NorthStar brings demolition, abatement, environmental and facility-transition experience into one qualification conversation.

SPECIALTY SERVICES / POWER-GENERATION FACILITIES

Evaluate the team behind the scope.

National scale is useful when it connects to the right people and relevant experience. Start with your facility type, location and work requirements; then assess the delivery entity, technical leadership and comparable projects.

SERVICE BREADTH | RELEVANT EXPERIENCE | DEFINED RESPONSIBILITIES

CAPABILITIES / SCOPE PLANNING

Qualify the team for the work.

Connect relevant experience with the responsibilities your project requires. Review these four evidence areas with the proposed team.

Comparable work

Review projects with relevant materials, retained operations and end conditions. Air Products' Texas City 2TX project combines demolition, abatement and restoration.

Delivery responsibilities

Identify the contracting entity, leadership and specialist roles. Confirm included services, separate engagements and how the interfaces will be managed.

Safety in execution

Review job safety analysis, supervision, training and task controls. Match requested performance records to the reporting period and delivery entity.

Technical breadth

Evaluate emergency response separately from planned work. Nuclear engagements require specialist scope, including the project's waste and license-termination responsibilities.

1 / 8

ENR 2025 · Two specialty rankings

Ranked in demolition and abatement/environmental.

NorthStar Group Services Inc. ranked No. 1 in Demolition & Wrecking and No. 8 in Abatement/Environmental. ENR's tables use 2024 category revenue: \$470.4 million and \$59.5 million, respectively.
