

DEMOLITION / QUICK FLYER

Remove what changes. Respect what stays.

Renovation rarely starts with an empty building. NorthStar connects selective demolition and abatement with the retained spaces, systems and operations that shape the work.

SELECTIVE WORK / RETAINED FRAMING

Define removal limits

Identify components to remove, retain or protect; connect drawings and field conditions to the work package.

Coordinate occupied settings

Discuss access routes, working hours, adjacent use and the controls required for the specific facility.

Sequence related work

Connect hazardous-material abatement, selective removals and turnover requirements with the construction team's next activities.

18,000+

Project hours · 2022-2023

Mass General Hospital, Boston

NorthStar's published project account reports more than 18,000 hours without an OSHA recordable during demolition and abatement work. The result applies to that project and period.
