

ENVIRONMENTAL SERVICES / QUICK FLYER

The final site condition deserves an early decision.

Removal is one stage of a property transition. NorthStar connects environmental work, material handling and site restoration with the condition an owner needs next.

Connect site workstreams

Coordinate demolition, remediation and restoration where they share access, material-handling areas or completion requirements.

Plan material movement

Address segregation, stockpiling, reuse and removal against the site's documented conditions and applicable project requirements.

Define the finish

Align grading, restoration and turnover documentation with the agreed scope and intended next use.

4,000

Cubic yards · Concrete reuse

Air Products, Texas City 2TX | 2023-2024

NorthStar's project profile records integrated demolition, abatement and site restoration, including 4,000 cubic yards of concrete reused and 3,100 gross tons of metal recycled.
