

INDUSTRIAL / THE RECOVERY PRIORITIES

Recovery and renewal for complex industrial sites.

NorthStar Recovery connects incident response with NorthStar's environmental and demolition capabilities for complex industrial sites.

Start with the site's next stage.

An incident, retrofit or asset retirement brings different decisions. Define what is affected, what remains operational and the condition the owner needs at completion. Build the work around known hazards, operating interfaces and the intended next use.

Understand the conditions

Coordinate active interfaces

Define the end condition

40+ years of experience

Emergency response · Environmental services ·
Reconstruction

INDUSTRIAL / FROM SCOPE TO HANDOFF

A coordinated path through the work.

Define the physical recovery scope, connect the responsible teams and agree on the decisions needed at each stage.

01 Define the intended outcome

Establish the affected areas, retained assets, known hazards and the owner's required condition at completion.

02 Plan the site interfaces

Coordinate access, work boundaries and handoffs with the teams responsible for operating facilities and site requirements.

03 Connect the specialist work

Coordinate the agreed environmental, decontamination and removal scope, including material handling and disposal needs.

04 Document the handover

Provide the agreed closeout information for owner review and the next stage of recovery, transition or redevelopment.

The people behind the decisions.

Site leadership and operations

Identify retained operations, access restrictions, work windows and the authority for site decisions.

Environmental and EHS teams

Coordinate known hazards, material information and applicable handling, transport and disposal requirements.

Engineering and asset owners

Define the intended end condition, operating interfaces and any required change-management or startup reviews.

SERVICES TO SHAPE THE SCOPE

- Emergency recovery
- Environmental remediation
- Hazardous-material abatement
- Decontamination
- Selective demolition
- Facility decommissioning

INDUSTRIAL / THE NEXT CONVERSATION

Relevant experience. Real project scope.

ProLogis / FedEx Facility | 2020

1.15 million sq ft

Two tornado-damaged logistics buildings required a 100-day demolition and remediation effort.

The 100 days cover demolition and site preparation, not full rebuilding.

Air Products: Texas City 2TX | 2023–2024

An active industrial setting

Demolition, abatement and site restoration were coordinated around utilities, retained operations and daily client decisions.

Four questions to bring forward.

01 Is the objective incident recovery, a retrofit or a planned facility transition?

02 Which operating areas and access routes must be accounted for in the work plan?

03 What surveys, material records and disposal requirements are already available?

04 What end condition and closeout information does the owner need for the next stage?

Define the next stage with NorthStar.

Discuss your site conditions, operating interfaces and intended outcome so the right recovery and specialist resources can shape the scope.
