

MANUFACTURING / THE RECOVERY PRIORITIES

Facility recovery, planned around production.

Connect emergency response, remediation and reconstruction with the spaces, access needs and recovery priorities that matter to your plant.

**The next
production
milestone starts
here.**

A damaged production area can affect packaging, storage and shipping beyond the immediate loss. Build the physical recovery plan around those connections, with plant leadership, engineering and quality involved in the decisions that shape the next stage.

 **Know the facility**

 **Set production
priorities**

 **Coordinate the
handover**

40+ years of experience

Emergency response · Environmental services ·
Reconstruction

MANUFACTURING / FROM SCOPE TO HANDOFF

A coordinated path through the work.

Define the physical recovery scope, connect the responsible teams and agree on the decisions needed at each stage.

01 Agree the priorities

Identify affected spaces, critical adjacencies, site access and the plant's immediate recovery objectives.

02 Define the physical scope

Assess building damage and known material concerns, then establish the remediation, removal and rebuilding work.

03 Coordinate the work

Sequence recovery activities with plant leadership and designated specialists, keeping scope decisions and progress documented.

04 Support the handover

Complete the agreed facility scope and coordinate the handoff for owner, OEM and quality signoffs on production restart.

The people behind the decisions.

Plant leadership

Sets production priorities, available work windows and the contacts authorized to make site decisions.

Engineering, OEMs and quality

Define equipment checks, product requirements and the acceptance decisions needed before production resumes.

EHS and risk management

Coordinate site hazards, work boundaries and the documentation needed by the wider recovery team.

SERVICES TO SHAPE THE SCOPE

- Pre-loss planning
- Environmental remediation
- Fire and smoke restoration
- Selective demolition
- Water-damage recovery
- Reconstruction

MANUFACTURING / THE NEXT CONVERSATION

Relevant experience. Real project scope.

Firestone Polymers Plant | 2020 ↗

23-day production restart

After Hurricane Laura damaged 35+ structures, production began following a 23-day recovery effort.

Production restart milestone; final project completion is not specified.

Dr Pepper / Snapple | 2013 ↗

Connected production spaces

After a fire and roof collapse, NorthStar supported the general contractor with restoration across production, storage and loading areas.

Four questions to bring forward.

- | | |
|---|--|
| <p>01 Which facility areas are needed for your next production milestone?</p> | <p>02 What nearby spaces, materials and access routes need protection during the work?</p> |
| <p>03 Who approves changes to the scope, schedule and site access?</p> | <p>04 Which owner, OEM and quality reviews must precede production restart?</p> |

Plan around your plant's priorities.

Bring your facility team and NorthStar together to discuss critical spaces, access needs and a practical recovery approach.
