

MANUFACTURING / RECOVERY & READINESS

Facility recovery, planned around production.

Connect emergency response, remediation and reconstruction with the spaces, access needs and recovery priorities that matter to your plant.

Know the facility

Capture access routes, staging areas, utility shutoffs and known material hazards before an interruption.

Set production priorities

Identify which facility areas support the next operating milestone and what needs to be protected around the work.

Coordinate the handover

Align physical recovery with the owner's engineering, OEM and quality reviews before production resumes.

SERVICES TO SHAPE THE SCOPE

- Pre-loss planning
- Water-damage recovery
- Selective demolition
- Fire and smoke restoration
- Environmental remediation
- Reconstruction

RELEVANT EXPERIENCE

Firestone Polymers Plant | 2020

Production restarted after a 23-day recovery effort following Hurricane Laura. This marks restart, not full project completion.

Plan around your plant's priorities.
