

MEDICAL / RECOVERY & READINESS

Facility recovery that works with your care environment.

Coordinate physical facility recovery with your engineering, infection-prevention and emergency-management teams, from site review through restoration and repair.

Understand the setting

Review affected spaces, adjoining departments, site information and the facility's priorities before defining the work.

Coordinate work boundaries

Plan access, material movement and work sequencing through the facility's engineering and infection-prevention review.

Connect the recovery teams

Include utility and water-management contacts where needed so building repairs align with the facility's recovery process.

SERVICES TO SHAPE THE SCOPE

- Water damage recovery
- Microbial remediation
- Selective demolition
- Fire and smoke restoration
- Hazardous-material abatement
- Repair and reconstruction

RELEVANT EXPERIENCE

North Central Bronx Hospital | 2020

Preparatory work covered 100,000+ sq ft across eight floors to support the hospital's wider ICU reconstruction program.

Bring the right teams into the conversation.
