

TECHNOLOGY / THE RECOVERY PRIORITIES

The facilities behind your technology.

Plan physical-site recovery around building conditions, controlled access and the technical teams responsible for your operations.

Define the work. Coordinate the dependencies.

Water, smoke and damaged building materials can affect spaces that support digital and research operations. NorthStar's physical-property recovery services can be scoped around your site's requirements and coordinated with the specialists responsible for technical systems.

 **Site conditions**

 **Controlled access**

 **Technical
coordination**

Emergency response · Environmental services ·
Reconstruction

TECHNOLOGY / FROM SCOPE TO HANDOFF

A coordinated path through the work.

Define the physical recovery scope, connect the responsible teams and agree on the decisions needed at each stage.

01 Map the site requirements

Identify critical rooms, access controls, environmental requirements and the specialists who own each technical interface.

02 Agree on the recovery scope

Define affected areas, authorized work and boundaries before physical recovery begins.

03 Sequence the site work

Coordinate mitigation and restoration with the owner's operating procedures and specialist availability.

04 Document the handoffs

Provide progress updates and work documentation. The owner's technical team directs system testing, restart and acceptance.

The people behind the decisions.

Facilities and site operations

Define the building recovery priorities, site procedures and authorized work areas.

Technical owners and specialists

Set system requirements and direct isolation, testing and restart of the systems they control.

EHS, security and risk

Coordinate site hazards, restricted access, reporting requirements and approval responsibilities.

SERVICES TO SHAPE THE SCOPE

- Physical damage assessment
- Water extraction and structural drying
- Fire and smoke restoration
- Mold remediation
- Selective demolition
- Repair and reconstruction

TECHNOLOGY / THE NEXT CONVERSATION

Relevant experience in complex facilities.

Pentagon Renovations | 2001–2011

Phased work in a complex facility

NorthStar Group Services performed phased abatement and demolition across 4 million+ sq ft, preserving active MEP services crossing work zones.

Government-facility experience, presented for its coordination demands.

AIG Campus Recovery | 2017

Coordinated physical recovery

Following Hurricane Harvey, recovery prioritized four office-campus buildings with temporary power and environmental support.

Office-campus experience; not a data-center case.

Four questions to bring forward.

01 Which rooms and supporting areas are most critical to your operations?

02 Who authorizes access and work near sensitive systems?

03 What environmental limits and site procedures must the recovery scope address?

04 Which specialists control system isolation, testing, restart and acceptance?

Map your critical-space recovery plan.

Bring facilities, EHS and technical owners together to define access, dependencies and the physical recovery scope before an incident.
